2 Adobe Research, USA

Introduction

Factual Inconsistency Detection

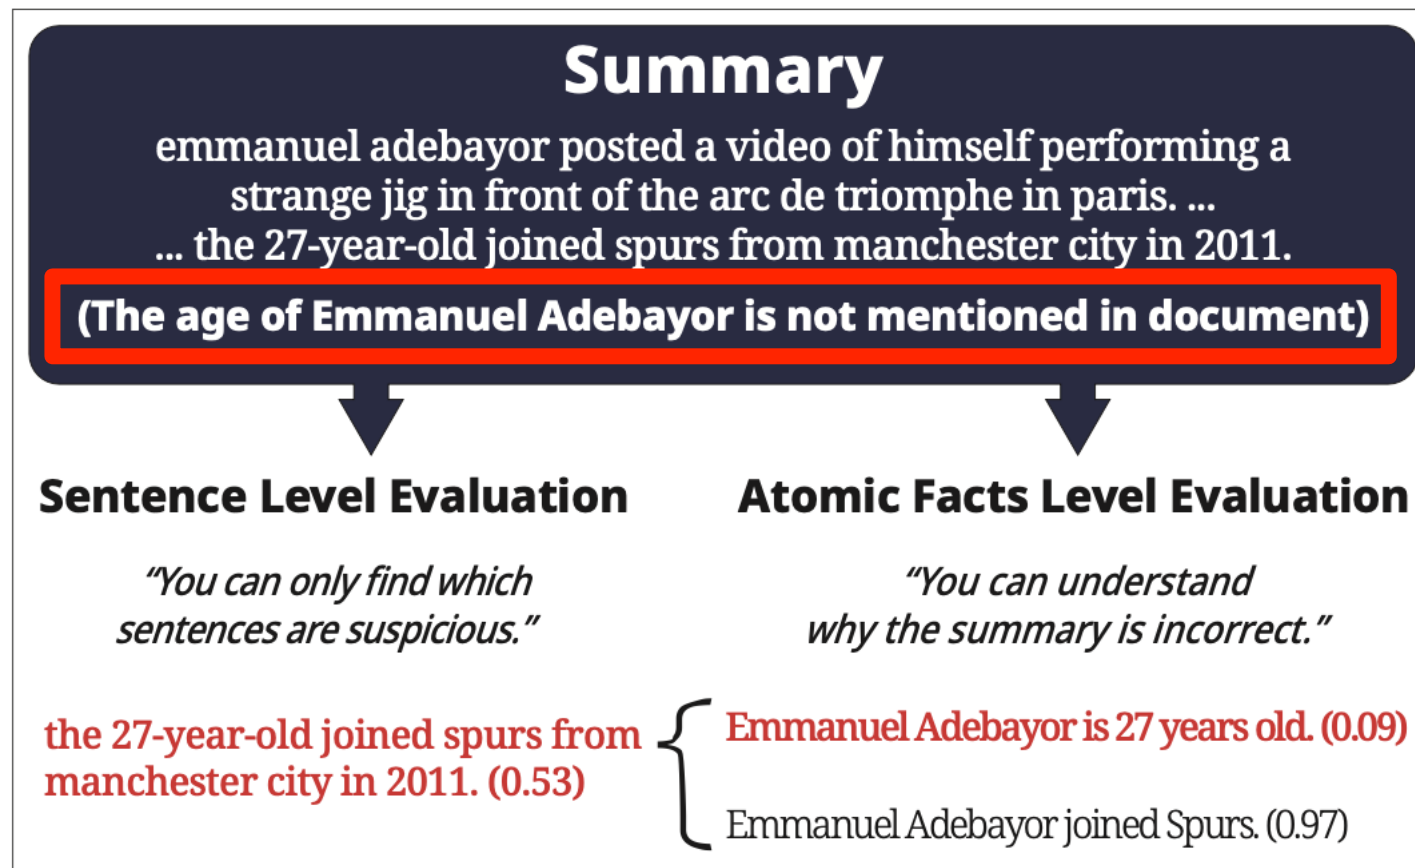

Factual Consistency: whether the generated text is factually consistent with the source (ex. news article, book, paper)

- **Task:** Catching a minor factual error (wrong entity or relation, coreference error, out of article, grammatical, etc.) of the summary

Motivation

- Sentence-level Evaluation vs. *Atomic Fact*-level Evaluation

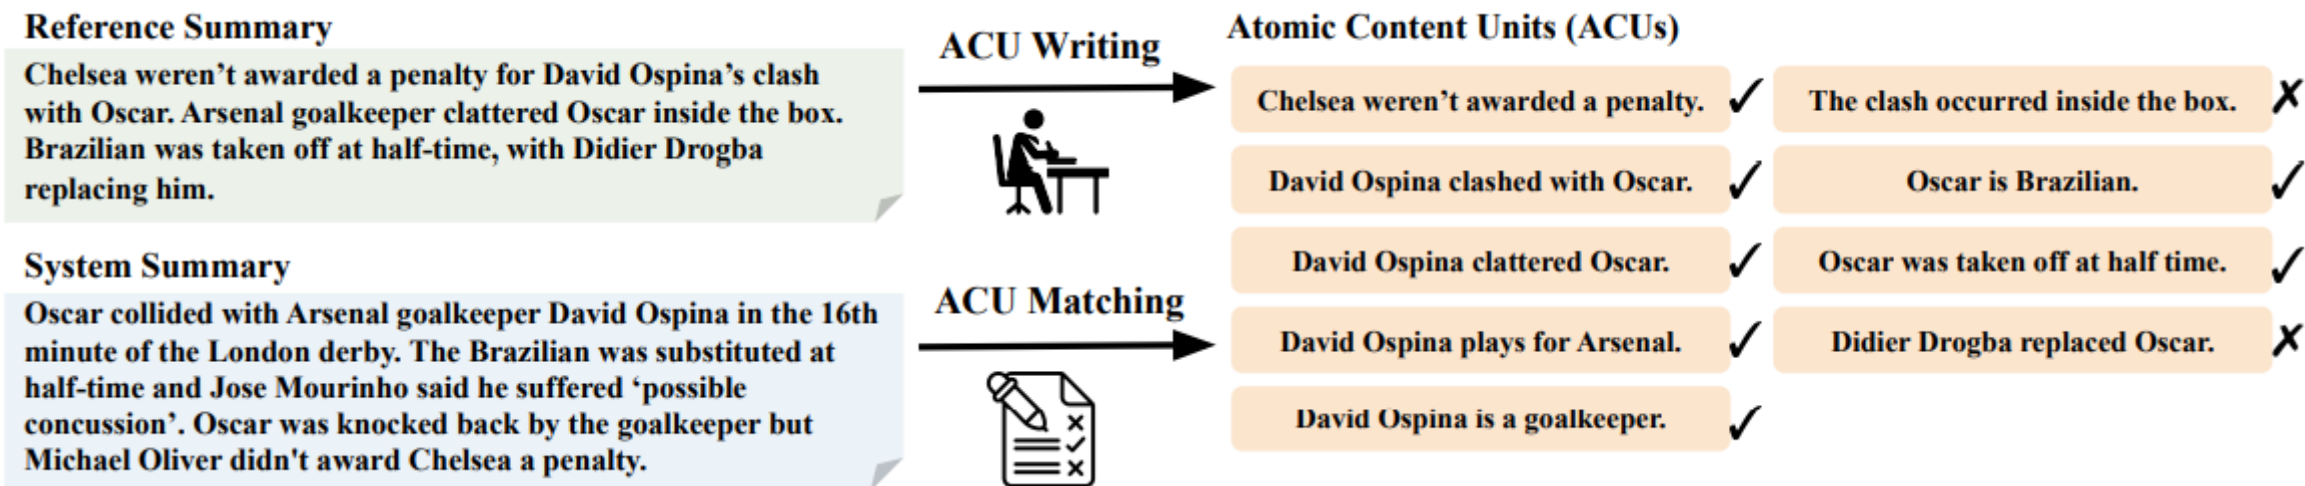

Atomic Fact: A more fine-grained information unit than a *sentence*

Atomic Facts

Examining the Consensus between Human Summaries: Initial Experiments with Factoid Analysis

(van Halteren & Teufel, NAACL 2003)

It can be impossible to provide a practical definition of atomic facts.

Our definition of an *atomic fact*: short and concise, containing no more than two or three entities, with person entities specifically resolved any of coreferences

Method

Overall Pipeline

[Atomic Facts Decomposition]

Summary with Coreference Resolution

Wales defender **Chris Gunter** says it would be a "massive mistake" to get complacent as they close in on euro 2016.

Atomic Facts Generation

1. Wales defender Chris Gunter is a soccer player.
2. Chris Gunter plays as a defender.
3. Chris Gunter is from Wales.
4. Chris Gunter says it would be a "massive mistake" to get complacent.
5. Chris Gunter says this as they close in on Euro 2016.
6. Euro 2016 is a soccer tournament.

Filtered Atomic Facts

- ~~1. Wales defender Chris Gunter is a soccer player.~~
2. Chris Gunter plays as a defender.
3. Chris Gunter is from Wales.
4. Chris Gunter says it would be a "massive mistake" to get complacent.
5. Chris Gunter says this as they close in on Euro 2016.
- ~~6. Euro 2016 is a soccer tournament.~~

Atomic Facts Filtering

[Atomic Facts Scoring]

Source Document with Coreference Resolution

... Sentence 4: The near misses are there as a reminder that in football even the most unlikely thing can happen until the job is done," **Gunter** added.

Sentence 5: "We've worked so hard for so long, it'd be a massive mistake to get complacent and think the job is done."...

Atomic Facts Decomposition: Zoom-in Summary

Document D , Summary S

- **Coreference Resolution**

$$D' = f_{coref}(D), \quad S' = f_{coref}(S)$$

- **Atomic Facts Generation**

$$S' = \{s'_j\}_{j=1}^N, \quad A' = \{a'_k\}_{k=1}^L$$

Probability distribution of NLI model

Entailment (E), Contradiction (C), Neutral (N)

- **Atomic Facts Filtering**

S' as the premise, A' as the hypothesis

We filtered out the *atomic facts* that did not meet the following condition:

$$\max(E, C, N) = E$$

Summary sentence:

“Chris Gunter says ... on Euro 2016.”

Filtered out *atomic facts*:

“Chris Gunter is a soccer player.”

“Euro 2016 is a soccer tournament.”

Atomic Facts Filtering

Atomic Facts

1. Wales defender Chris Gunter is a soccer player.
2. Chris Gunter plays as a defender.
3. Chris Gunter is from Wales.
4. Chris Gunter says it would be a "massive mistake" to get complacent.
5. Chris Gunter says this as they close in on Euro 2016.
6. Euro 2016 is a soccer tournament.

Filtering

Filtered Atomic Facts

- ~~1. Wales defender Chris Gunter is a soccer player.~~
2. Chris Gunter plays as a defender.
3. Chris Gunter is from Wales.
4. Chris Gunter says it would be a "massive mistake" to get complacent.
5. Chris Gunter says this as they close in on Euro 2016.
- ~~6. Euro 2016 is a soccer tournament.~~

Atomic Facts Scoring: Zoom-out Document

- Atomic Facts Pair-Wise Scoring

$$D' = \{d'_i\}_{i=1}^M, \quad A_{filtered} = \{a_k\}_{k=1}^L$$

D' as the premise, $A_{filtered}$ as the hypothesis

We assign scores to each *atomic fact* based on the **maximum entailment** score

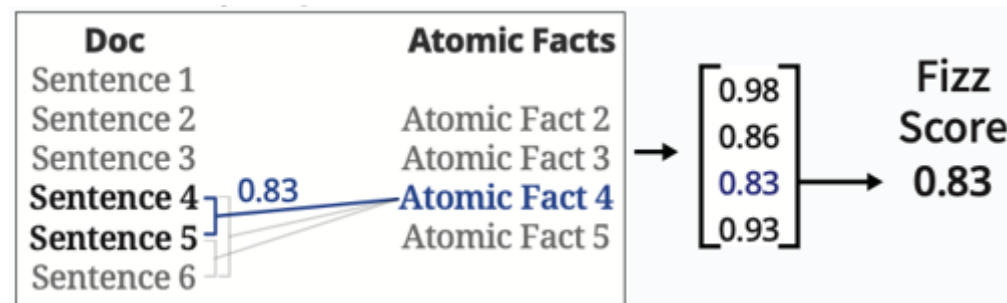

$$E = \{e_{i,k}\}, 1 \leq i \leq M, 1 \leq k \leq L$$

$$t_k = \max_{1 \leq i \leq M} e_{i,k}$$

$$T = \{t_1, \dots, t_L\}$$

- Adaptive Granularity Expansion

It is necessary to examine multiple sentences across the document because of *abstractiveness*

Granularity Expansion

Experiments

Dataset

- Dataset

AggreFact (Tang et al., ACL 2023)

- Evaluation

document d , summary s , metric $f(d, s) \rightarrow y$

$$y \in \mathbb{R}$$

Threshold t

$$f(d, s) > t = 1, \text{ else } 0$$

$$f'(d, s) \rightarrow \{0, 1\}$$

Threshold-per-dataset

Single-threshold (*FtSota* split)
